The Kramer Mounting Frame

The Kramer **FLA-10** is a mounting structure that consists of the **FLA-1F** and the **FLA-2F** and is used to install Kramer inserts to Ackermann Flush floor service units. The **FLA-1F** is a single insert frame and the **FLA-2F** is a dual insert frame.

The package includes the **FLA-10** mounting structure, 2 sets of **FLA-2F** dual insert frames and one **FLA-1F** single insert frame.

You can install up to 5 **FLA-1F** and/or **FLA-2F** in the Kramer **FLA-10**.

Figure 1: FLA-10

To install a Kramer insert, do the following:

1. Place and align the required wall plate insert item over the opening.

2. Insert the two screws to fix the insert in place, and tighten them.

To install the **FLA-1F**/**FLA-2F** insert, do the following:

1. Place and align the **FLA-1F**/**FLA-2F** over the screw holes on the **FLA-10**.

2. Insert the two screws to fix the insert frame in place, and tighten them.

To install the **FLA-10** inside the Ackermann Floor Box, do the following:

1. Run the cables through the Ackermann underfloor cable opening.

2. Connect the cables to the rear side of the inserts.

3. Fit the **FLA10** tab into its designated place in the Ackermann underfloor box.

4. Place the tab with the slot into place in the Ackermann box and tighten the screw in place.

5. Connect the desired cables to the inserts.
