

SMS PROJECTOR WL SHORT THROW V+

All light on the projection screen, not into the speaker's eyes.

A wall bracket with generous adjustment facilities to obtain the best possible image quality at all positions. The projector can be suspended at any location along the complete pillar for depth adjustment.

Furthermore, the wall plate can be adjusted both horizontally and vertically. Fine adjustment is very easy with the aid of adjustment knobs on the universal slide, which is now available in white or black to match the projector. The choice of white or black plastic fittings is also new.
