

Connecting AVer Visualizers with HVC Series VC Systems

Steps

1. Set up your HVC series video conferencing system per the instructions in the user manual
2. Connect the Visualizer (VGA Out) with the main system / codec (VGA In) using a VGA Cable. If you are already engaged in a call at the time of connecting the Visualizer, please proceed to Step 4
3. Your HVC series VC system should detect the Visualizer and present the live image automatically upon connection
4. If you are engaged in a call before the Visualizer is connected, press the "Present" button on the Remote Control and select "VGA" from the onscreen menu to view / share the live image

NOTE:

1. If the message "VGA-In: Unplugged" appears on the screen, please confirm that the VGA cable is connected properly on both ends
2. If the message "VGA-In: Unsupported Resolution" appears on the screen, please use another VGA cable. If the problem persists, please go to <http://communication.aver.com/technical-support>
